# VCM INDEX

## Organising **Decommissioning Project** information through visual structures

❑ View project data structures that are more intuitive to navigate.

❑ Communicate project information using a visualisation mode.

❑ Indexed data enables project information to be searched and found easily.

❑ Secure cloud based solution enables access from any internet connection.

❑ Share project information and collaborate online in real-time.

Decommissioning metrics for safety, environment, technical, societal and economic are available with the VCM Index application for the removal, disposal and clearance aspects of platform decommissioning. Also available is a comprehensive inventory of materials covering; material type, location, weight and other data.

VCM Index is an innovative digital transformation application that uses visual communication of data linkages to significantly improve overall management and control of any decommissioning project.
